

We Recommend Growing with the Following Mix:

Sunny Girl Gardens

Ready to Grow Award Winning Mix

100% Organic Soilless Growing Mix 

Just Add Water and Grow!

Everything you need for Award Winning Results

No Mixing
No Worry
No Work
No pH Balancing
No Chemicals
No Testing Equipment
Just Plant and Water

Starter Kit Contents:
 1 - 4000 Style Classic Container (Refillable)
 1 - 4.46 gal (17.02 L) bag Sunny Girl Top Mix
 1 - 4.46 gal (17.02 L) bag Sunny Girl Bottom Mix

Refill Kit Contents:
 1 - 4.46 gal (17.02 L) bag Sunny Girl Top Mix
 1 - 4.46 gal (17.02 L) bag Sunny Girl Bottom Mix

Complete Instructions Included

Stoney Girl Gardens

Oregon, USA

Strain Guide 2008

Seed and Cutting Guide

- World Class Breeder
- Exclusive Signature Series
- Oregon Medical Marijuana Program

Spring/Summer Edition

Who We Are

Stoney Girl Gardens is a private group of patients and caregivers inspired by Jenifer Valley and dedicated to everyone in the Oregon Medical Marijuana Program. We believe in sharing our success and experience with qualified individuals. If you follow our advice exactly and use our strains we guarantee your results to be award winning. ~Peace~

Stoney Girl Gardens is a World Class Breeder and Award Winner. Stoney Girl Gardens is continually creating true breeding strains such as Pit Bull, Berkeley Blues, Wrex.

Our Exclusive Signature Series breeds have twice won first place in the OMCA awards, and have been featured on full page articles in High Times. Our garden has been visited, viewed, photographed and qualified by many well known horticulturalists such as Ed Rosenthal. Our catalogs are featured in the famous Amsterdam coffee shops, and our strains sought after by professional seed companies. They are only available however to qualified OMMP candidates. This is a true North West Tradition. We focus exclusively on our own projects and share our accomplishments. We offer grow classes to qualified organizations. It takes about 1 to 3 years for us to perfect a single true breeding strain. Advanced breeding seminars are also available.

We don't just grow seeds, we produce true breeding strains. Stoney Girl Gardens has one of the largest seed bank reserves in the US. We are a true breeder in Oregon and recognized world wide by our breeding associates and top experts in the field. All of our seed stock is of the finest breeding quality, each seed specifically inspected and controlled for heredity and quality of genetics. This brings you the consistency of getting what you expect, with no surprises.

Stoney Girl Gardens is an accredited and acclaimed world class breeder. While others simply produce Hybrids, we only produce the finest True Breeder Quality seeds, acclimated for the North West.

Growing the Stoney Girl Way

First, It's easy. Results are guaranteed regardless of the species. Organic gardening brings out the true taste of the plant. Organics are taking over in all competitions including the world famous Cannabis Cup in Amsterdam. Our recipe is time tested and taken from professionals with great experience. Easy is the word. Stop worrying about PH, Microbiology, testing and being a degree Horticulturalist. Our mix starts with sterile, professional products that take the mystery and cost out of gardening. Grow like a Pro. Just Plant, Water and Go. Why do we share? We remember trying to start and the trials and tribulations with success and failures, mostly the latter. We found this easy way and want everyone to be as successful as we have been.

Why do we breed?

We have searched the world over for the right kind of medicine. When we couldn't find it, we made it. We start by selecting a species with the best flavor and effect. We have grown over 100 species to test in our garden. Often however the best taste and effect take a long time to grow. The OMMP confines the number of plants per patient. Working within these parameters and keeping a good supply of medicine is difficult. Stoney Girl Gardens has bridged this gap using a combination of good planning techniques and developing fast growing, extremely potent, mouth watering species. We believe that the OMMP has afforded us the opportunity to create the finest in world class medicine. **Welcome to Oreaon.**

August West

Delicate flowery flavor with speedy high. A four-way cross of Crippler(m) on White Rhino(f) with Blueberry(m) on Berkeley (f). Mother was Crippled Rhino, father was Berkeley Blues. Mid size with tight buds. Good producer, stores well. 32 days to flower.

Available

Seed: Yes
Cutting: No

Berkeley

Super sugar and super fast. Skunky taste. Created for outdoor with smaller buds, but more sugar than any other plant except Pit Bull. High is a very speedy up high. This was some kids science project at Berkeley. Great producer. Taste is very expando so be careful. Good early (28 days).

Available

Seed: No
Cutting: Yes

Berkeley Blues

Fast, Blue buds with velvet sugar. Amazing outdoor producer, but perfect indoor too. Blueberry taste with Berkeley sugar and speed. A must have if you like blueberry. This is one of our personal favorites. Great producer bush with purple/blue stems.

Available

Seed: Yes
Cutting: Yes

NEW! Wrex

Look out for this potent puppy. One of our strongest. mixed for extreme or terminal patients Cross of Pit back on P-91. Produces well, stores well. New for 2008. Good red color pistols outdoors. Finishes fast.

Available

Seed: Yes
Cutting: Yes

**NEW! Oregon Purple Kush**

Pure Hawaiian Purple Kush mixed with Pit Bull. Get that full on grape taste and huge bush growth in much less time. More crystal and a slight bit more skunk. Now grow that favorite blast from the past in a much shorter time. Acclimated for the North West. Huge producer. Grows extremely well outdoors. Pure Grape.

Available

Seed: Yes

Cutting: Yes

**NEW! Purpit**

Pure Hawaiian Purple Kush backcrossed on the Pit Bull. This produces highly potent Pit taste with a grape finish. Nice mix of traditional Purple Kush with a bite. Fast growing and budding cycle.

Available

Seed: Yes

Cutting: Yes

**P91**

If you like G-13 then you will love this. Recommended as a substitute for patients that use morphine or heavy downers. Pissy skunky flavor. Effective medicine and produces well indoor and out. Medium to large fast cloning, fast growing.

Available

Seed: No

Cutting: Yes

**Candy**

Cross between Burmese and Sugar Plum. Bright orange hairs and great crystal count. This is a bush that grows mid sized and is a great producer. Excellent Citrus taste and smell. Very sweet. Flowers in 28-35 days.

Available

Seed: Yes

Cutting: No

**Crippled Rhino**

Our first breeding project. Thai crossed with White Rhino. Very fast and very huge, long colas. Light green 13" leaves. Traditional Thai taste. Tight buds store well. Gets 6' tall indoors and very expansive. Taste is Flowery, Per fummy and Stoney as Hell. One of our favorites and a must have.

Available

Seed: No

Cutting: Yes

**NEW! Cripit**

Chocolate Thai anyone? We crossed the Pit with Crippled Rhino and got that old fashioned Buddha Stick flavor and punch. Unlike Thai however, this plant is finished in 45 days. Extremely potent with that blast from the past flavor. You wont want to miss this one.

Available

Seed: Yes

Cutting: Yes

**Haze Plum**

Deep tropical flavor and stone Lovely blue-green color with golden buds. Skunk like smell. Very good and another of our favorites. Grows well indoors and out. Produces great and preferred by many Hydro shops. An all time crowd pleaser. Finishes in 30 – 35 days.

Available

Seed: No

Cutting: Yes

**Sugar Plum 1st Place 2003 OMCA**

As featured in HT GA this baby is a must have. Cross between Haze Plum and Berkeley Blues. Outstanding midsized bush with huge colas. Tight buds, stores well, very sugary. Flowering is done in 28-30 days.

Available

Seed: Yes

Cutting: Yes

Ultimately the plant you select will be the one of personal taste and effect. But there are many other considerations before making a selection that could turn out to be a big waste of time and a lot of frustration. Don't be fooled by colors and beautiful photography. Its taste and potency you're after. Ask around, try some for yourself if you can. Not everyone has the same effect or the same conditions.

Crystal vs. Hash Resin

Above taste and effect, above Indica and Sativa, there is a noticeable difference in crystal content and more so type. Take the Hash Plant for instance that has more pollen like resin growing on the buds as opposed to the clear droplets that form on a Hawaiian. You will find that many breeds such as AK47, Afghani, White Rhino or Humboldt are types of Hash Plant pollen resins. If you want to make some Hash then select this kind of plant. In general we have found that the hash plants have a limit of THC content production and that the effect of this THC is not favorable to the majority of medical patients. In general go for the clear crystal producers. These types can actually produce so much resin that it will drip off the plant. The effects are increased and have a longer life. That said go for the most crystal producing strains.

Pit Bull

Award Winning Sugar Plum crossed with P91. Our most potent and tasty new creation. Grows fast and furious with large abundant fruit. Sugar is like none other. Taste is fruity and earthy mix with a tropical bottom note. 36% t

Speed

Forget about growing Thai outside in the northwest and plan to be real patient if you grow indoors because this variety takes 12 to 14 weeks in the bloom cycle alone. The average cycle for Stoney Girl Gardens strains is 4 weeks in the green stage and 4-5 weeks in the bloom stage. This means that we look for a full season to be only 7 to 8 weeks, beginning to end. Be sure you check the length of growing time for the strain you want. Don't get caught waiting longer than you should. Be aware that some species take a long time and if you want to enjoy them you better have lots of patience.

Remember there are alternatives and new strains that deliver better performance with better tastes. Don't get stuck on old technology like skunk, kush, afghani, g-13 or AK47. Try some new stuff like Sugar Plum, Pit Bull, Berkeley Blues or P91 (government replacement for g-13).

Sativa vs. Indica

There has been a lot said about the two of these types but in general you will get the "Earthy" old time orient taste from a broad leaf Indica and a sweet Hawaiian flavor from a thin Sativa leaf. Most new species are combinations of these. I find myself wanting to keep both a species that leans to the Indica and another that leans to the Sativa side for variety. I am one who believes that if you consume only one variety you will acclimate to the effects of that variety and therefore become less effective.

Size

I've read a lot of seed catalogs that list Indoor vs. outdoor strains. This is somewhat true and of more concern for the outdoor grower than the indoor grower. I have raised a very large outdoor species in a 3' closet with great success. If you're really confined for space like an attic or crawl space then there are species such as NL5 and Sugar Plum that stay small but produce heavily. Be careful not to confuse the NL#5 with NL. Northern Lights is a big monster that grows 12-14' even indoors. I have had to tie this one down several times to keep it contained. All in all select the one that is best suited to your taste, provides a sufficient quantity, is easy and fast to grow, and has a strong, lasting effect.

Flavor

Every flavor awaits you. From spicy to tangy, chocolate to fruity, sweet to sour, its all out there. I recommend a variety for a number of reasons. The first reason is that it is fun to have the "spice rack" full of flavors. The second is the acclimation or getting used to a particular effect. The third is the effect itself. Some species is certain couch lock while others act like a speed causing you to be unable to rest for a second. Some is better for morning allowing for a normal work day and others are perfect for bed time. All of this coincides with the next item Effect.

Effect

As mentioned before there are different effects from different species. August West and Berkeley are one of the best species for getting on the go. They are also bad for people with anxiety conditions as they will not relax you. On the other hand, Crippled Rhino will place you into the couch for a 4 hour death grip leaving you with no other choice but to stare at the ceiling. The biggest thing I have to say here is that a good strain is good, no matter what. You should never wonder if you got an effect. If you're asking then you did not. The effect should be sudden, strong and lasting. An average range should be about 4 hours even if swimming or eating. If your following our organic recipe then you can certainly tell when your not consuming organic product.

Quantity

Some species are quite delightful. I have Exotica which throws the most eloquent looking lavender buds. The incense like smell is nothing compared to the grape taste and devastating effect. The problem was that the plant only produces about 1/2 an ounce and took 8 weeks in the bud cycle. Although I hated to loose a prize taste from my collection, the time and trouble was not worth the end result. Remember to weigh the quality for quantity. Lots of nitrogen will make any plant huge but turn it into "no high Thai". Don't settle for a plant too small or too promisingly large.
